Childcare Affordability Challenges in the United States

Summary of Analysis

The National Database of Childcare Prices (NDCP) offers detailed insights into childcare costs across the U.S., broken down by state, county, and age group (infants, toddlers, preschoolers). This dataset also includes economic and demographic indicators such as household income, employment status, and family structure.

For this project, the focus was on median childcare costs by age group at the state level, analyzing geographic disparities and trends over time. Python (Pandas, Matplotlib) and Tableau were used for data cleaning, aggregation, and visualization, enabling comparisons between childcare expenses and median household income.

Findings

- Infant care is consistently the most expensive category, with California, Massachusetts, and New York as the highest-cost states.
- Midwest and Southern states generally have lower childcare costs.
- Many states have seen gradual cost increases, while a few remain stable due to subsidies or demand factors.
- In high-cost states, infant care can consume over 25% of median household income, far exceeding the 7% affordability benchmark.
- Minimal missing data exists, but inflation adjustment is needed for better temporal analysis.

Assumptions

- MCInfant, MCToddler, MCPreschool represent full-time care.
- Study Year accurately reflects data collection year.
- Aggregated state-level data is representative of state trends.
- Socioeconomic indicators are current and reliable.
- Minimal missing data does not skew results.

Direction of Story

The core message is that childcare affordability is an escalating challenge in the U.S., with certain states placing a severe financial burden on families. The aim is to push for policy action, increased funding, and community initiatives to improve access and affordability.

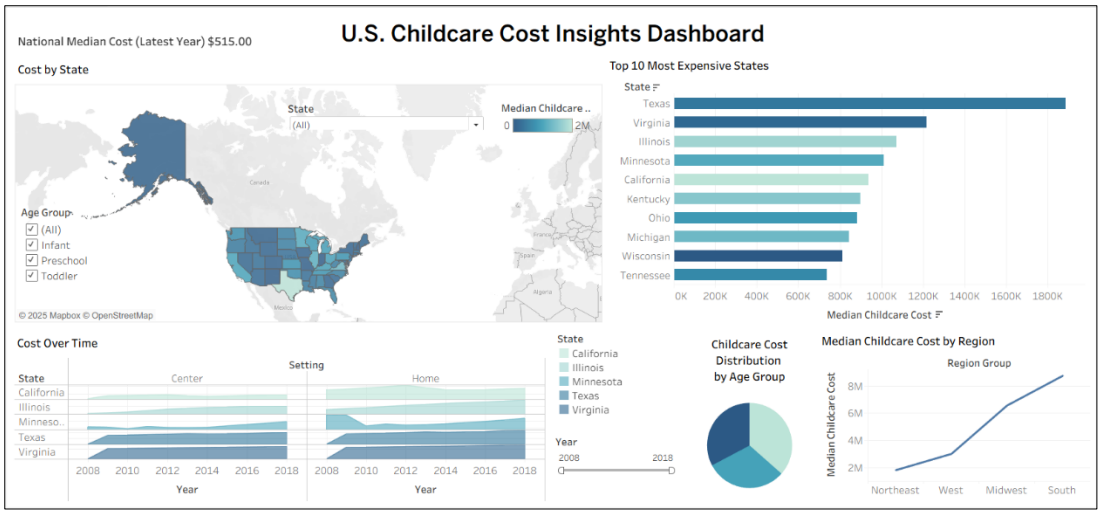
Target Audience

- Policymakers & Government Officials
- Parents & Caregivers
- Nonprofits & Advocacy Groups
- Researchers & Academics

Mediums Included

1. Interactive Dashboard – For dynamic exploration of state-level cost trends with filters for state, age group, and year.

Arulsree_DSC640_T301_TermProject_Mediu



2. Analytical Report – Structured PDF for detailed policy analysis and transparent methodology.

Design Decisions

- Choropleth Map for geographic disparities.
- Bar Charts for cost as % of income comparisons.
- Trend Lines for historical changes.
- KPI Cards for quick highlights.
- Clear labels, legends, and tooltips to avoid misinterpretation.

Ethical Considerations

- Removed incomplete records and aggregated county-level data to state-level.
- Data is from the U.S. Department of Labor and publicly available, with no privacy violations.
- Choropleth maps could exaggerate differences; mitigated by including affordability metrics.
- Assumptions were documented; no unlabeled filtering was done.
- Verified against official U.S. Department of Labor publications.
- Yes, dataset is open-source and publicly accessible.
- Maintain transparency in labeling, document all filters, and disclose limitations in reports and dashboards.

Policy Recommendations

- **Enhance Childcare Subsidies:** Expand federal and state support to cover more families, especially in high-cost states, aligning with the 7% income affordability benchmark.
- **Invest in Infant Care Infrastructure:** Prioritize funding for public and subsidized infant care centers to address the highest cost burden and improve access.
